

User Stories - HOT WAR

1. Togepi, a high school student who likes playing videogames, has recently become fond of playing Valorant with her friends during her free time. She has been struggling with giving correct valorant callouts to her teammates therefore losing multiple games due to incorrect/lack of callouts. She wants to better understand these maps and memorize their callouts so she and her friends can win more games, but she doesn't have the attention span to actually sit down and memorize the callouts. She wants an interactive game that would help her with memorization. She finds our game that has a prebuilt valorant map callouts. She is able to run our game with the valorant map callouts dataset. She enjoys the interactivity our game provides. She is now able to learn these callouts more efficiently and in more of a fun way. She is now able to give valuable and accurate callouts in her Valorant games and win more matches than before.

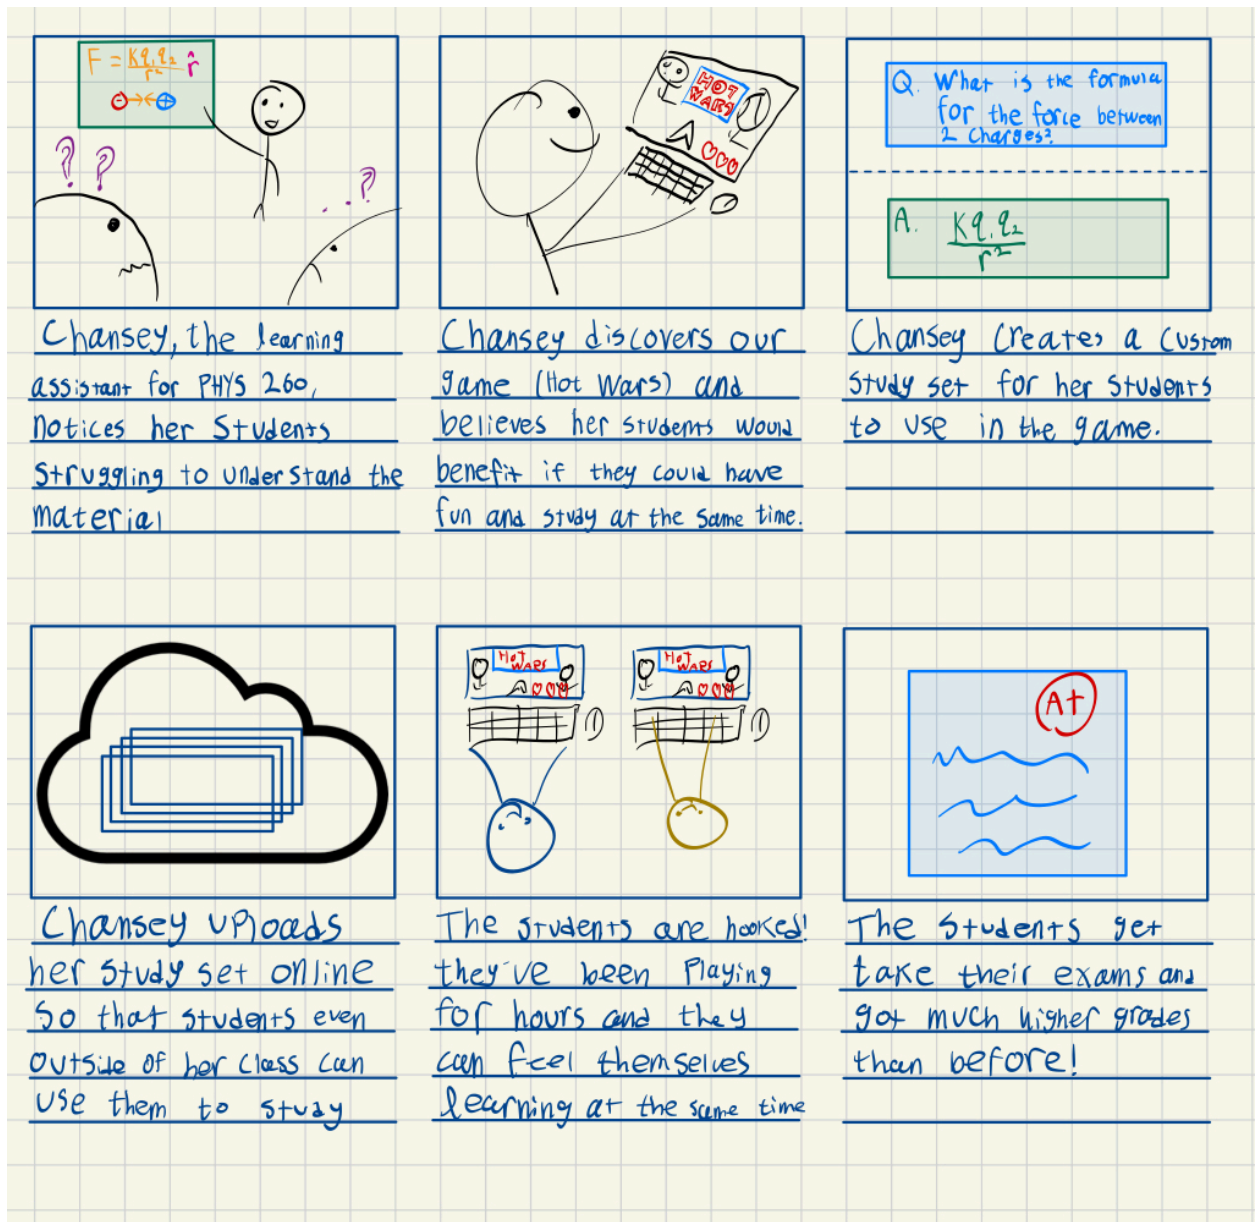

2. Wobufett is a Spanish teacher who is attempting to get his students to learn how to conjugate verbs. He has tried quizlet, but the ipad kids in his class continue to appear to learn nothing from their given quizlet time, as they continue to perform poorly on their quizzes. He has recently been told by his students that they really like some of the features that quizlet offers, but they're locked behind a paywall, so they aren't able to

use them as many times as they want. He sees after a bit of googling that there's another game that'll allow him to create a study set specific to his course that all of his students will be able to access with no restrictions, and after creating his study set he is able to share his lessons to the whole community, so other teachers that are teaching conjugation can also use his created studysets.

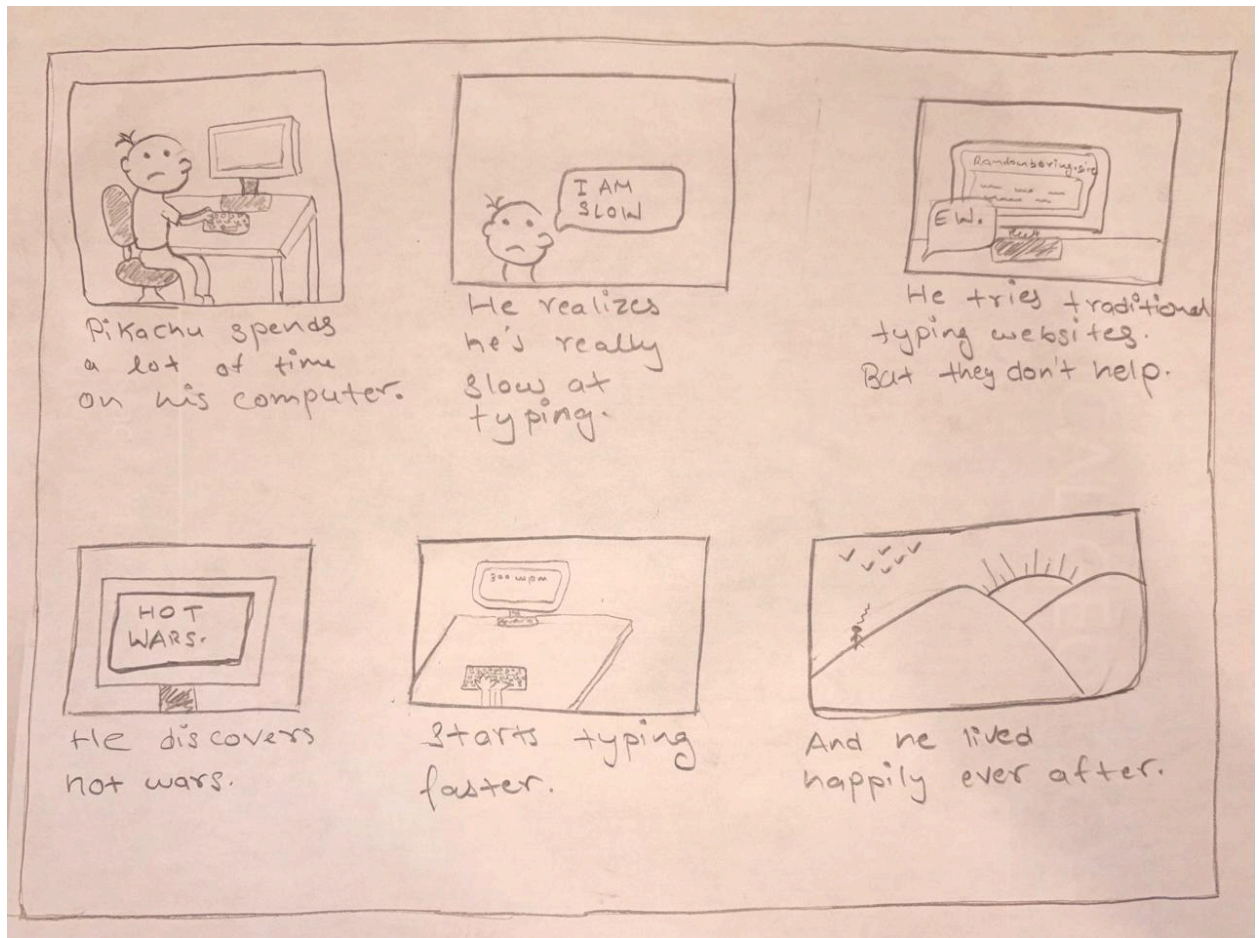

3. Chansey is a Learning Assistant for the notoriously difficult University Physics II course. She frequently sees her students struggling to understand complex electromagnetic equations and wants to give them a fun way to practice. She created a comprehensive study set on HOT WARS (our game). She wanted a way to share it with her students but couldn't. That was until the developers (us) added the COUNTER INTELLIGENCE feature to allow Chansey to publish her set to a public server. Now, all of her physics students can easily search and download her study set for free to use in their own HOT WARS games. Now the students will be able to learn the formulas interactively and Chansey feels accomplished knowing she supported their learning outside the

classroom.

4. Pikachu is a college student who spends a lot of time on his computer studying, chatting with friends, and playing games. He recently noticed that his typing speed is slower than he would like, especially when writing essays or coding assignments. He has tried using traditional typing practice websites, but he quickly gets bored because the exercises feel repetitive and not very engaging. Pikachu wants a way to improve his typing that feels more interactive and fun. While searching for alternatives, he discovers our word-typing game where words fall from the top of the screen and must be typed before they reach the bottom. The fast pace of the game keeps him focused, and the increasing difficulty challenges him to type faster and more accurately. Because the game feels more like entertainment than practice, Pikachu ends up spending more time playing and naturally improving his typing speed and accuracy over time.

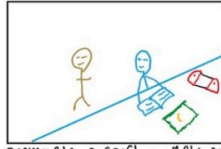

5. Eddie is a college student who spends a lot of his time on computer gaming. His favorite type of game is a strategy game. He really wants to study while also playing an RPG game. There are not a lot of methods out there that will allow for study while also gaming. "As a gamer, I want to play a strategy game that I can use for studying so that I can learn the materials needed for my course material. I also want to create my own strategy action game so that I can study using the materials straight from my class." He does not want to give up time for gaming, while also not wanting to study for too long. Because this game involves strategy, he spends some of his day committed to this game and ends up helping him get better grades.

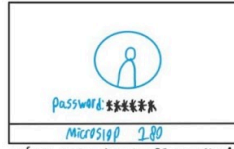

Story Board

Eddie studies his material for his class. He wants to play video games.

Roommate suggests a new game **Hot War!** Eddie is intrigued; wants to play.

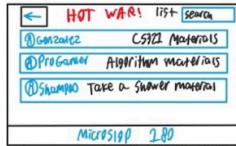

Eddie logs into his computer to play this 'new' game.

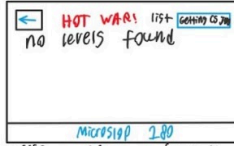

Eddie opens stream to install **HOT WAR!**

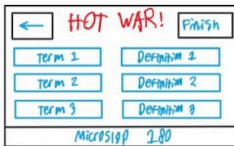

After installing, Eddie wants to see if there are any games available.

Eddie looks at the list of games created by other creators. "Aw man, an educational game!"

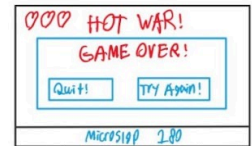

Eddie cannot find the level he wants to play. He decides to create his own level.

Eddie is starting to type his own terms and definitions.

Eddie tries his own game, and he likes it.

Despite the loss, Eddie thinks this game will help him with his studies.
